

LHC HIGGS WORKING GROUP*

PUBLIC NOTE

Predictions for Production Cross Sections of the Higgs Boson at the LHC and HL-LHC

Instructions for authors:

- Add your name on the author list in the appropriate group. Anyone who was/is a convener since we started this work should be listed as such. External people should be listed in the “In collaboration with”. All groups should be alphabetical.
- Add your affiliation(s) and *update* the affiliation list appropriately.
- Please respect the formatting of tables etc by looking at previously committed material.

WG1 conveners: Hannah Arnold¹, Alessandro Calandri², Alexander Karlberg³, Bernhard Mistlberger⁴

ggF conveners: Alessandra Cappati⁵, Robin Hayes⁶, Alexander Huss³, Stephen Jones⁷

VBF conveners: Gaetano Barone⁸, Jiayi Chen⁹, Silvia Ferrario Ravasio³, Mathieu Pellen¹⁰

VH conveners: Suman Chatterjee¹¹, Valerio Dao³, Giancarlo Ferrera¹², Matthew Lim¹³

$t\bar{t}H/tH$ conveners: Josh McFayden¹³, Valeria Botta¹⁴, Malgorzata Worek¹⁴, Marco Zaro¹²

$b\bar{b}H/bH$ conveners:

In collaboration with:

¹*Brookhaven National Laboratory, PO Box 5000, Upton, NY 11973, USA*

Abstract This note documents state-of-the-art predictions for the production cross sections of the Higgs Boson at the LHC. Specifically, Standard Model predictions for the LHC with centre-of-mass. energy of 7, 8, 13, 13.6 and 14 TeV are presented.

1 Introduction

Production cross sections for the Higgs boson based on the Standard Model of particle physics were collected in the CERN Yellow Report "Deciphering the Nature of the Higgs Sector" (YR4) (CERN-2017-002) [1]. Since this document became public many advancements in our abilities to predict production cross sections were achieved. Furthermore, the LHC performed measurements at a higher centre-of-mass energy of 13.6 TeV for which YR4 does not contain any predictions. Looking ahead to Run-3 and the High Luminosity phase of the LHC (HL-LHC) and the associated wealth of data that will be collected an update of the HWG recommendation of all production cross sections to reflect the current state of the art is called for. The aim of this note is to document recent advancements and review the ingredients for the prediction of Standard Model predictions for the production cross sections of the Higgs boson at the LHC (similar in spirit as in YR4). Updated numerical predictions for central values of the production cross sections and associated theoretical and parametric uncertainties are the main result of this article. This note supersedes the interpolation of Ref. [2].

For now, instructions and input parameters for the generation of numerical values can be found here: <https://twiki.cern.ch/twiki/bin/view/LHCPhysics/LHCHWG136TeVxsec>
